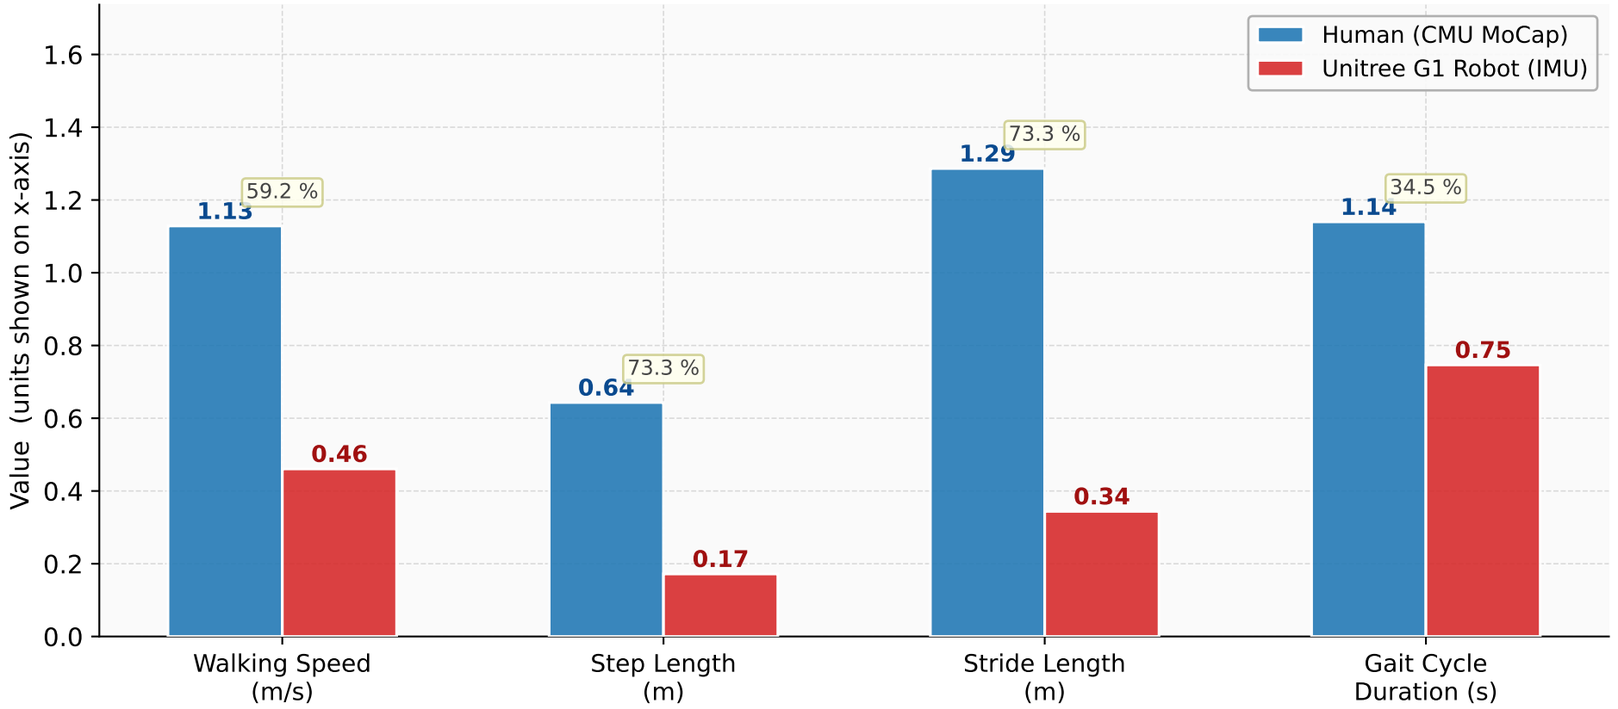
Figure 3: Spatiotemporal Gait Parameters
Human (CMU MoCap) vs Unitree G1 Robot (MuJoCo IMU)



LIMITATION - Human walking speed: AMC position unit estimated at 0.054 m (hip height root_ty ~16.7 units ~ 90 cm); walking speed and derived spatial metrics carry ~+/-15% uncertainty. Step length = speed / cadence; Stride = 2 x Step; GC duration = 2 / step_frequency.
